## 3 Technologies That Could Create Trillion-Dollar Markets Over the Next Decade

By Greg Satell Updated April 21, 2019 9:00 a.m. ET

Yet today, we're in the midst of a **materials revolution**. Powerful simulation techniques, combined with increased computing power and machine learning, are enabling researchers to automate much of the discovery process, vastly accelerating the development of new materials

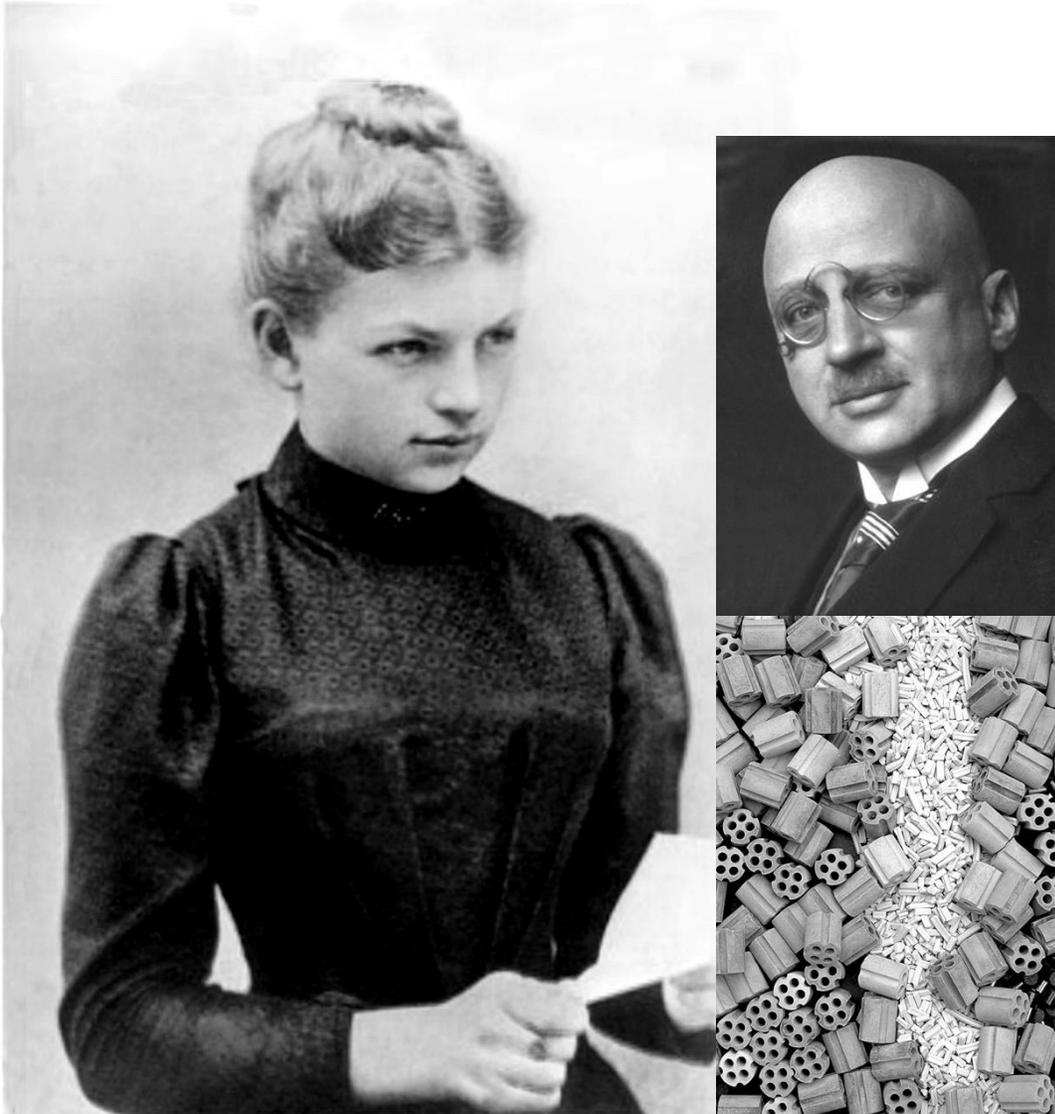

**BARRON'S (April 2019)**

# NEXT TIME YOU FLY

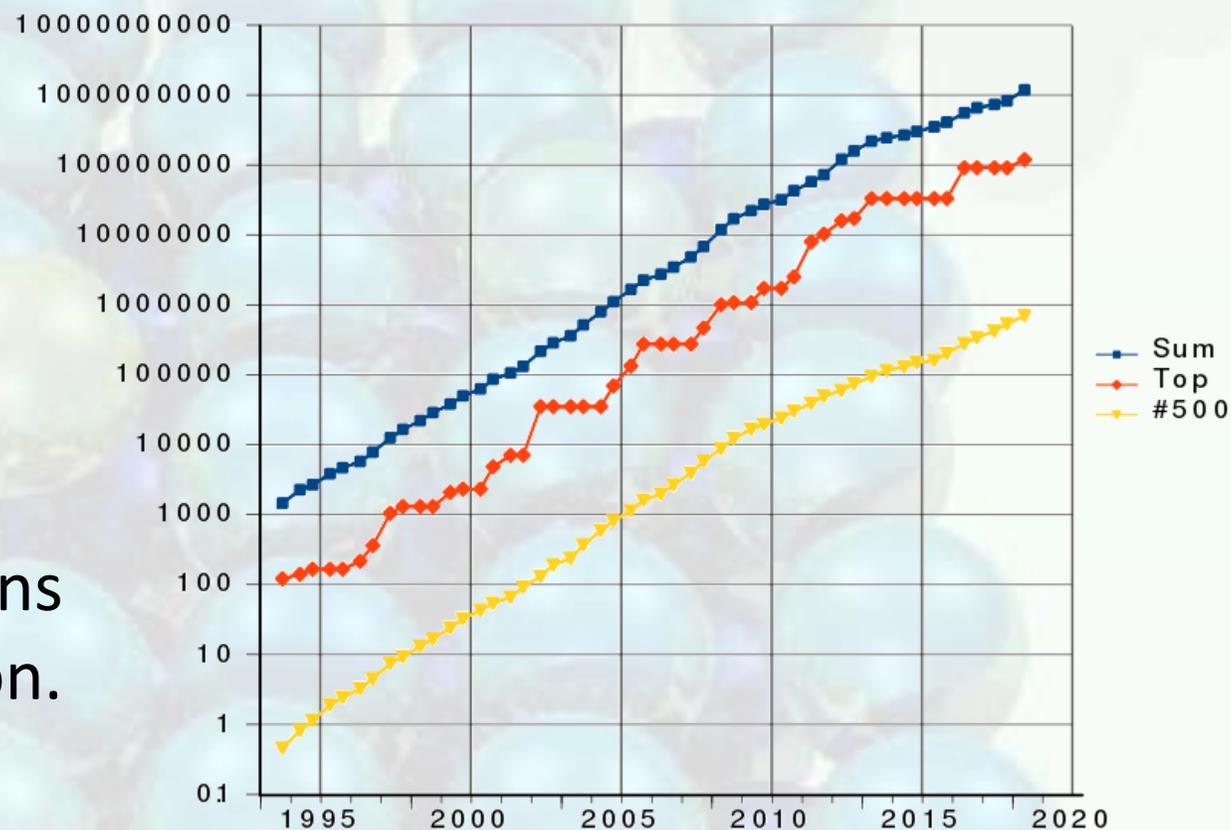

# FEEDING 7 BILLION PEOPLE

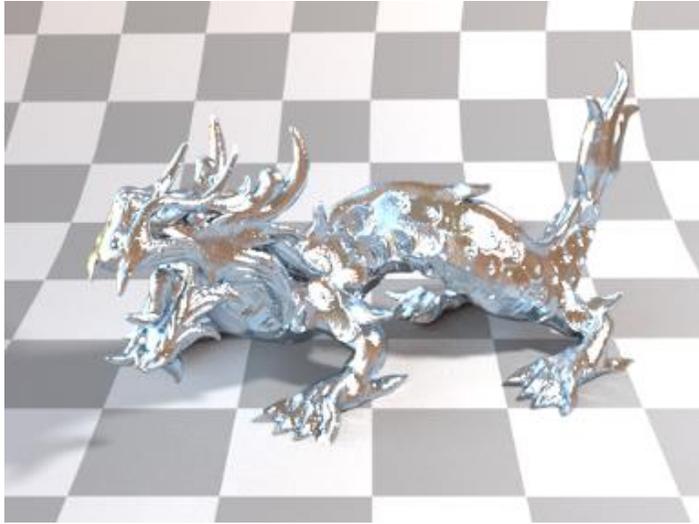

A calculation that took  
**one year in 1990**  
would take  
**one second in 2019**  
(33-million-fold increase).

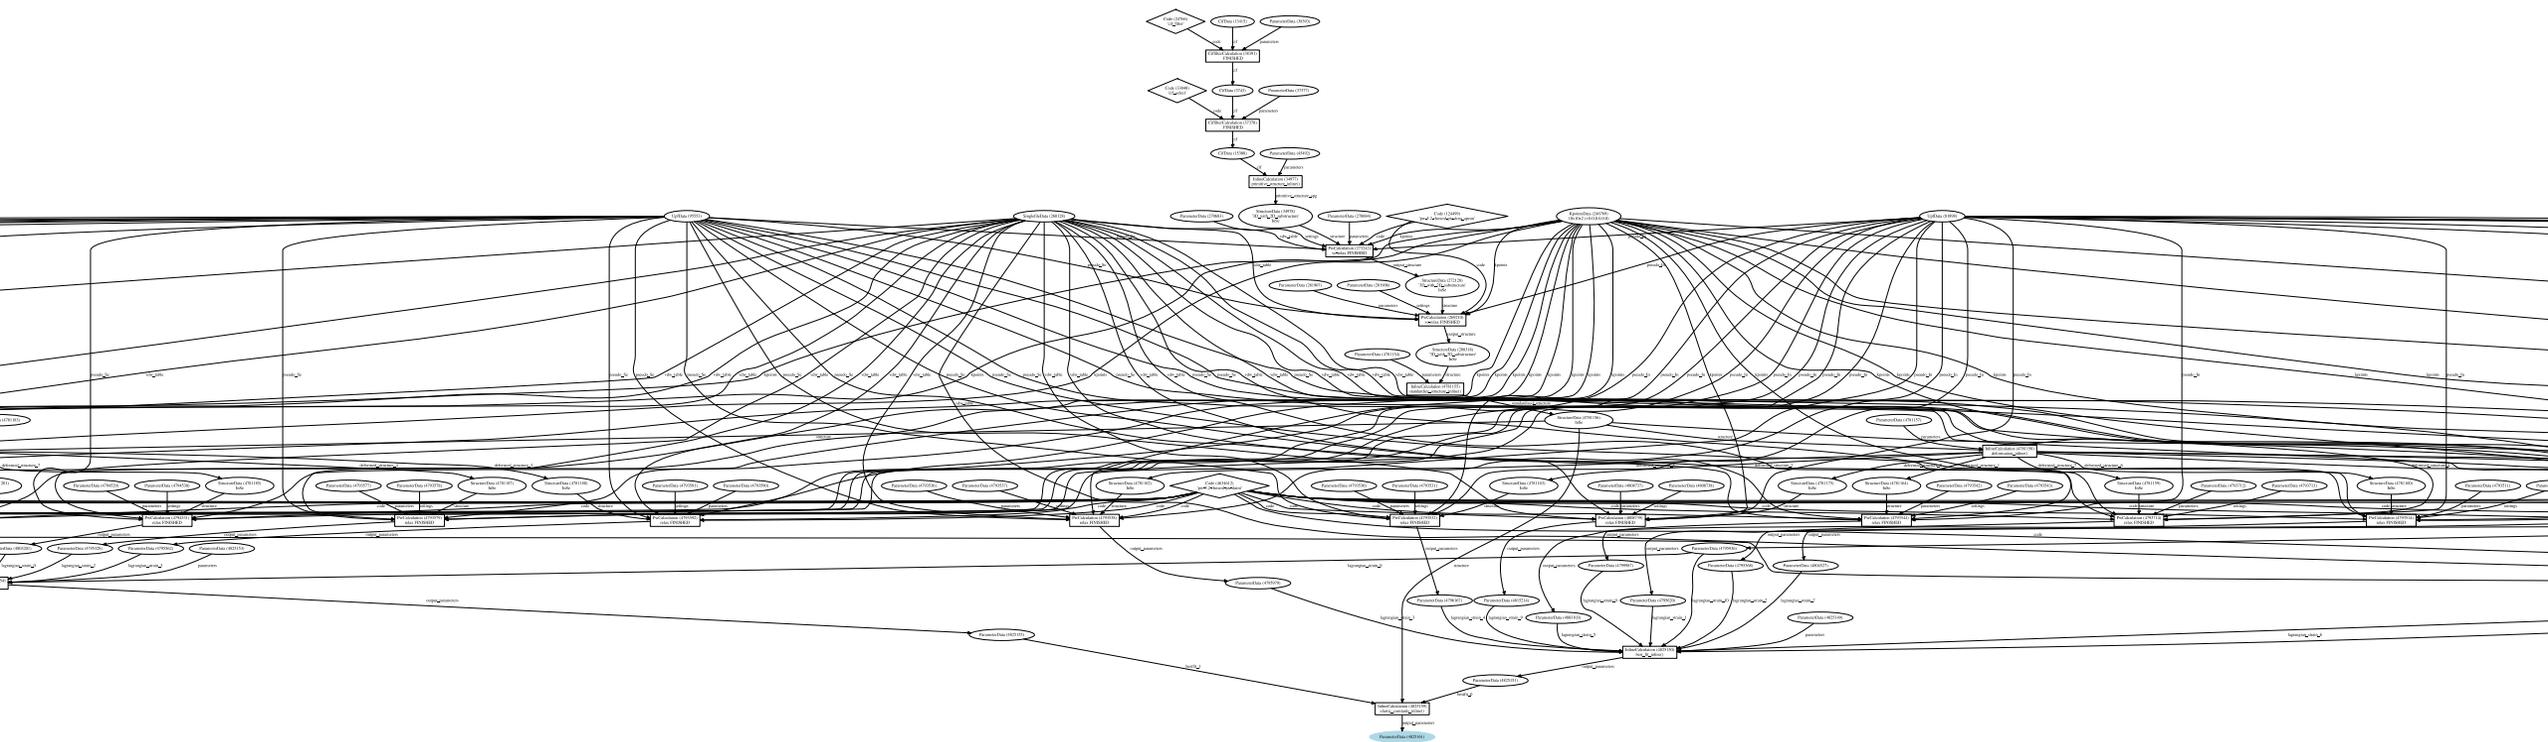

And this is just with bits: neurons  
are in, and qubits on the horizon.  
**21<sup>st</sup>-century science will be  
computational.**

NEWS FEATURE

# THE MATERIAL CODE

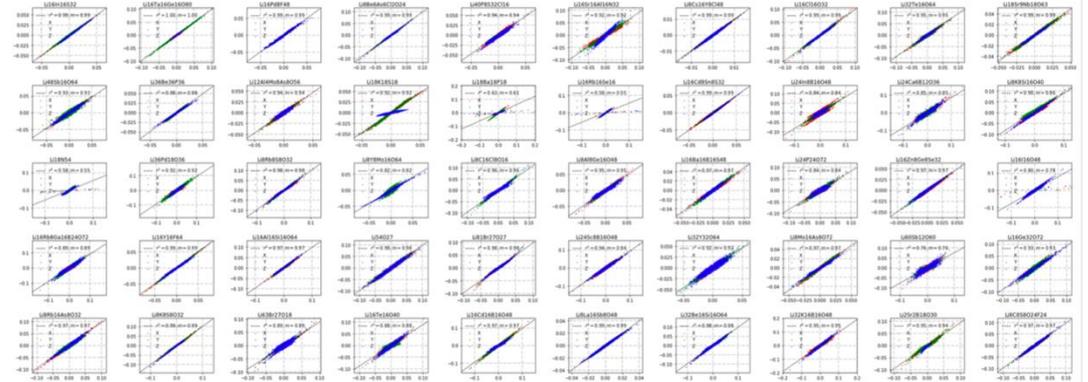

*Machine-learning techniques could revolutionize how materials science is done.*

BY NICOLA NOSENKO

Nature, May 2016

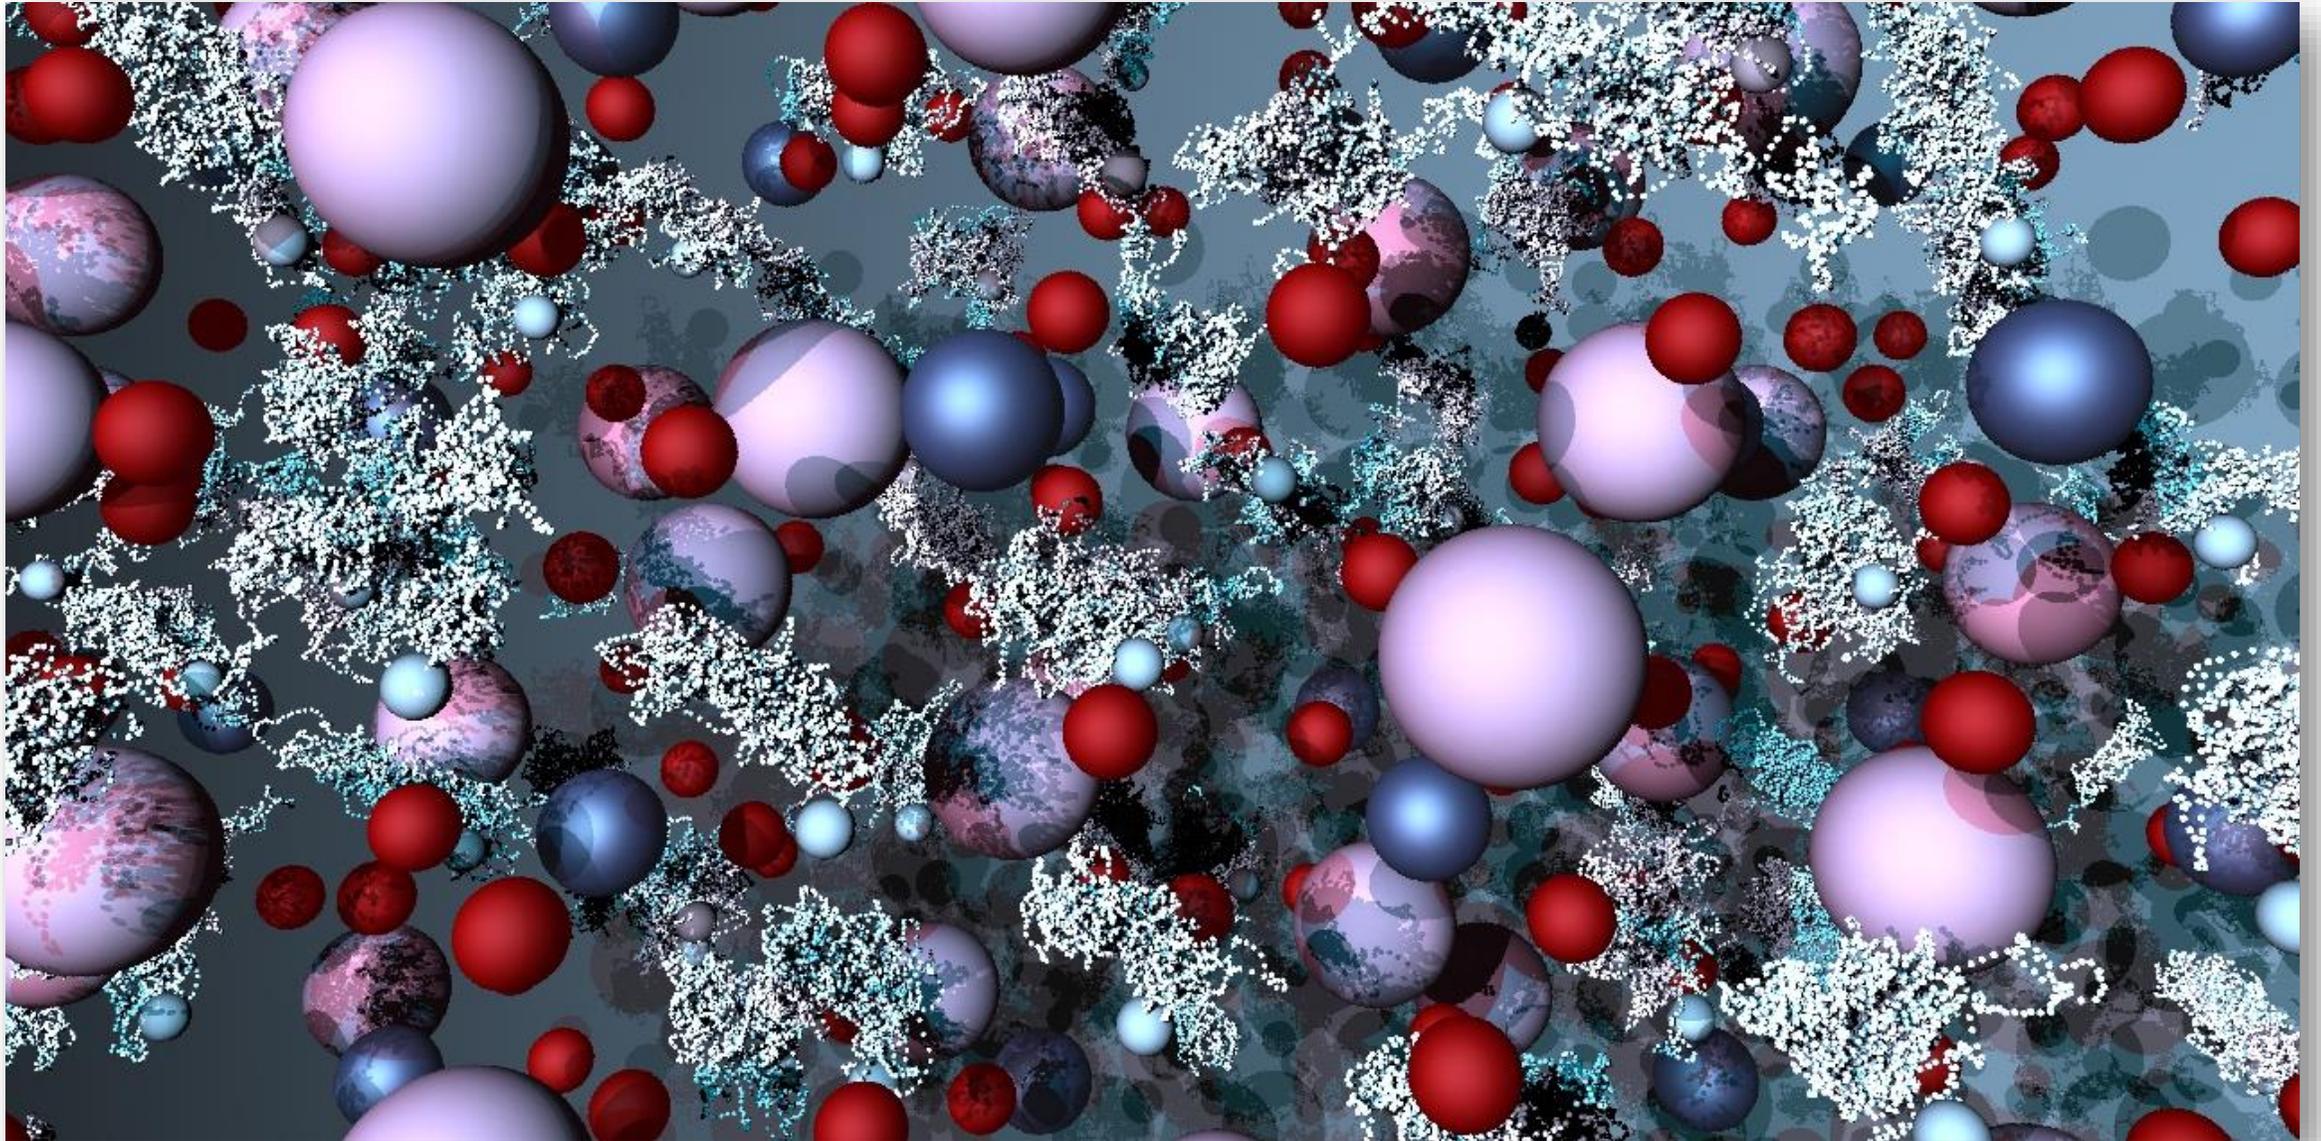

**I**t's a strong contender for the geekiest video ever made: a close-up of a smartphone with line upon line of numbers and symbols scrolling down the screen. But when visitors stop by Nicola Marzari's office, which overlooks Lake Geneva, he can hardly wait to show it off. "It's from 2010," he says, "and this is my cellphone calculating the electronic structure of silicon in real time!"

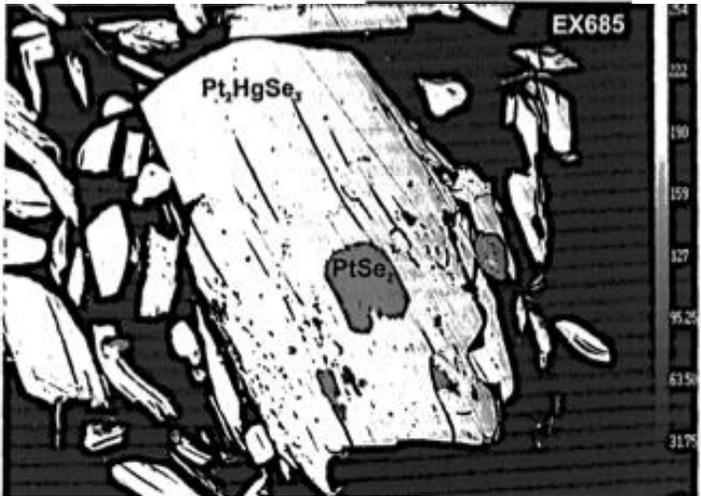

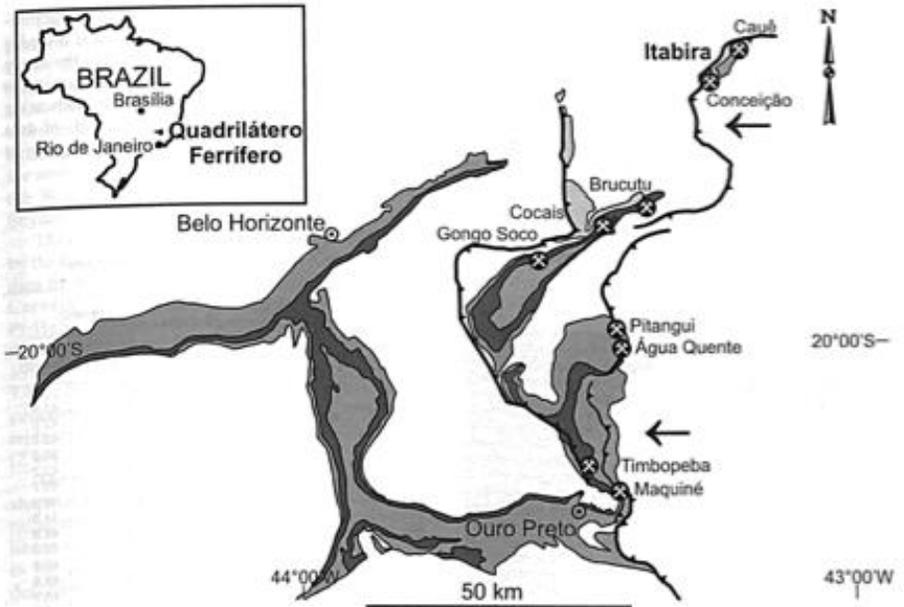

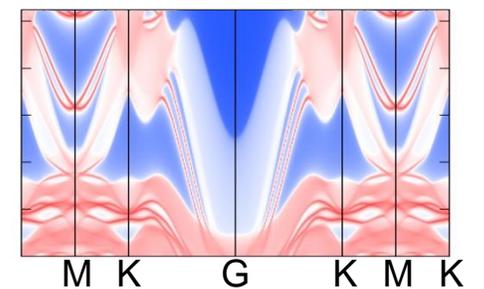

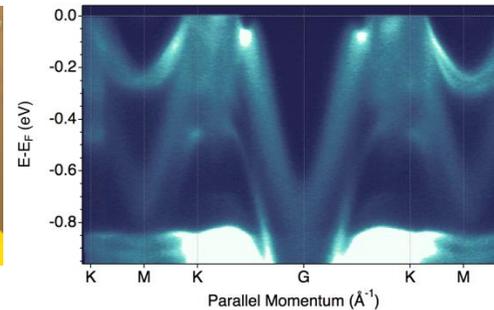

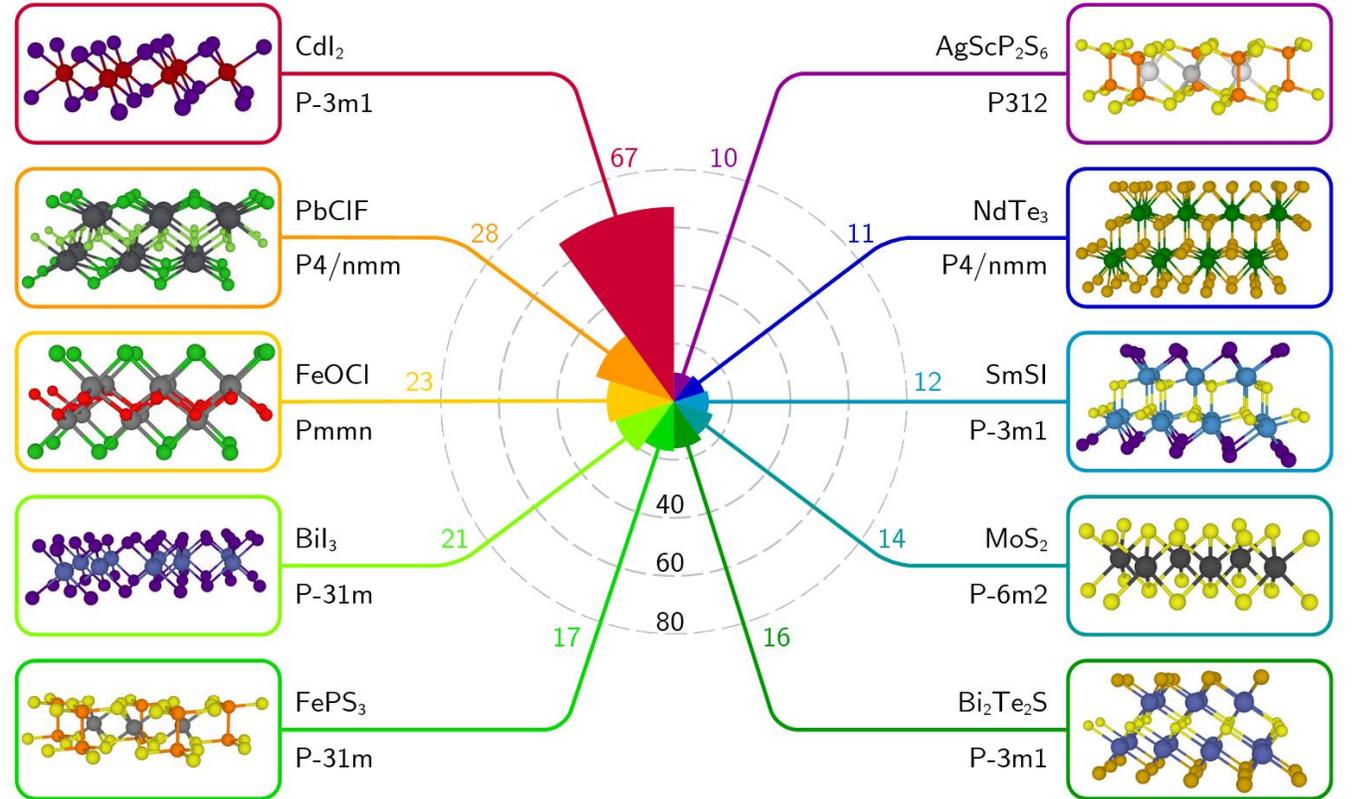

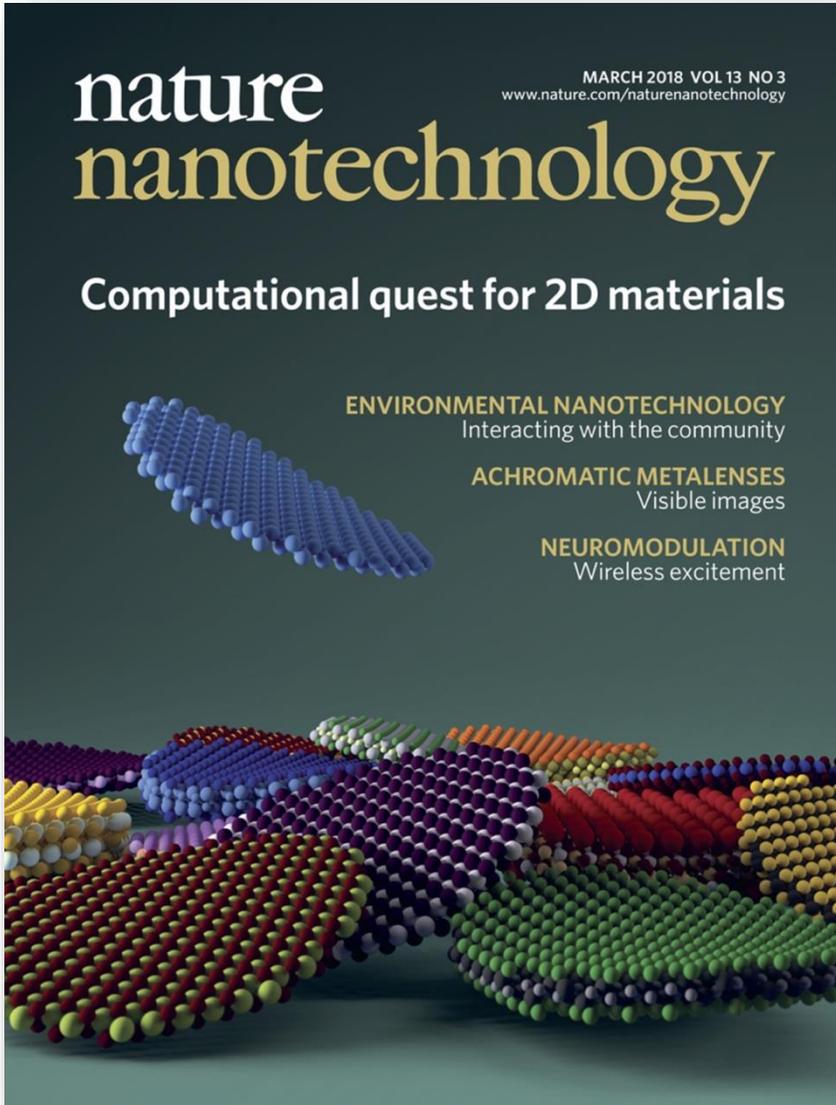

Energy density of a battery is one-tenth of a TNT bomb!

# NEW SOLID STATE CONDUCTORS

# A ROOM-TEMPERATURE TOPOLOGICAL INSULATOR

1. Materials enable the technologies that sustain our economy, our lives, our society
2. We are changing the entire paradigm of materials design and **discovery** (QM simulations, ML/data, neuro/qubit)
3. Physical infrastructure ceases to be the limit of exploration
4. Computational science will be foundational and pervasive
